

**Amendments to the Specification:**

[0012] Figure 5 shows a side view, partially cut-away, of an embodiment of a bicycle lock to be glued in a saddle tube. Figures 6, 7, 8 and 9 are sectional views showing alternative non-circular locking pin shapes.

[0022] Moreover, it is also possible to have a design with a concentrically applied locking pin, if the pin has a trapezium-shaped, rectangular, square or hexagonal section (Figs. 6, 7, 8 and 9 respectively) that catches in a similarly shaped notch in the crankshaft. This may also help to secure the bicycle lock when the bicycle is locked.
